

Breakout session 2

Eco-friendly and age-friendly city in IT based network society

Networking by IT in various areas such as energy, health and long-term care, and transportation has been promoted at fast pace. Such development programs are mostly carried out independently among the different areas.

We will discuss the utility of IT as an integration tool, hurdles to clear to realize the grand plan, and their possible solutions. By sharing the ideas and experiences through the reports from different regions of the world, we will seek for social innovation by utilizing IT.
